

Environmental Policy

All Mobile Workshop Technicians have been trained and issued with Mend-A-Hose Hydraulics Ltd Safety Guidelines and working practice together with necessary equipment to institute our strict environmental policy.

This basically means when we first arrived on site we assess any pollution risks (i.e. leaking oil liable to go into drain, oil leaked into soil or oil leaked into tarmac).

We will then contain the spill. Wherever possible using the spill kit carried on each of our vehicles. After affecting the repair we will clean the site in accordance with Environment Agency guidelines.

Should any further actions need to be taken to avoid an environment incident we will advise you what these should be. If you agree we will take necessary actions on your behalf.

John Duff
